

Product Information Sheet

Soliflex XMD

X-ray & Metal detectable homogeneous belts for improved food safety and foreign body prevention

The **Soliflex XMD** belt range helps to detect broken belt fragments with a proven sensitivity control level. The belt works with metal detectors and X-ray machines.

Special **test cards** help to determine the minimum size. What's the smallest belt fragment that can be detected? Minimum size depends on many factors such as type of X-ray & metal detector, ring size, belt speed, vibrations, humidity, food product, and fragment shape and position. As there is no industry standard for the smallest detectable particle, Soliflex XMD test cards are even more unique in helping you determine the correct parameters.

- **Soliflex CB TPU/30 light blue 800mm FG 1 row XMD**
- **Soliflex RS TPU/25 M1T R18 B light blue FG XMD**

FEATURES

- Available in TPU
- Food Grade belts comply with EC 1935/2004 and FDA standards
- Available with Soliflex Center Bar (CB) for positive drive
- Flexible for flat and trough applications
- Aramid-reinforced Soliflex RS XMD for friction drive applications
- Accessories such as cleats and sidewalls

BENEFITS

- Easy detection of broken belt fragments
- 100% sealed edges and covers
- Easy cutting to any size without the loss of quality
- Excellent hygienic properties in line with ISO 22000 requirements (previously HACCP)
- Wide operating temperature depending on article code starting from -20°C up to 70°C
